

## Company profile

Started in 1998 as a spin-off company of the internationally recognised Department of Information Technology (Intec) of Ghent University in Belgium. Comsof provides consultancy services and develops customized and dedicated software solutions for the telecom industry.

Comsof has two flagship software platforms:

**FiberPlanIT** makes FTTx network planning smart, fast and easy: both in the strategic planning phase – when estimating costs, comparing technologies and maximizing Return on Investment – as during detailed network design - when creating optimized to-build plans while integrating field survey data. This is possible thanks to FiberPlanIT's unique automated and optimized design capabilities based on GIS data.

More info: [www.fiberplanit.com](http://www.fiberplanit.com)

**TelecomCostExpert** is a top-down cost modeling software platform, designed specifically for the Telecom market. It enables to model complex cost structures, while giving a crucial insight in the cost structures in a clear and reliable way through its unique reporting capabilities.

Comsof's team exists of highly-skilled professionals with an extensive technological knowledge and experience concerning telecommunications, regulatory environment and software development. They are continuously giving our customers the necessary support and consultancy to make their projects a success.
